

AGRISPON®
Bio Stimulant

QUEENSLAND PLANT CANE TRIALS, WELL UNDERWAY

Irrigated Plant Cane trial

Agronomist Robert Drewitt inspecting Plant Cane, well underway

Billet showing excellent root development with Agrispon.

Paddock size replicated cane trials have been underway in Bundaberg since July 2003 and progressing extremely well thus far, with both products:-

Madura Guano Gold-Kwik Start & Agrispon a specialised Bio Stimulant product. Extracts from data so far indicate from the individual Phosphorus & Silica analysis, we have an obvious app 30% - 40% increase in uptake of P & Silica in the "Guano Gold" treated blocks, when compared to standard treated blocks.

Calcium, Phosphorus and Silica levels are also slightly higher in the combined Guano Gold treated blocks, and we believe the extra Silica levels in Guano Gold are having a synergistic effect on Ca, P, and to a certain degree S.

This has occurred with a slightly lower basal application in the Guano treatment as well. In basal fertilizer the standard treatment has had 9 extra units of N and 4 extra units of P, than what the Guano Gold treatment has had.

Whilst the AGRISPON treated blocks, clearly indicate superior shoot emergence, again close monitoring is being conducted and documented

Mr. Jashar went on to confirm that a substantial investment has been made in these trials, and an independently written report will be compiled upon completion of the trials later this year.

STAY TUNED !!!!
